Problem statement. Analysis of recent researchers and publications. The American researcher N. Chomsky introduced the concept of “competence” in his work “Language and Mind” in 1968 [3]. It was one of his most significant works. Later the term “competence” was adopted by the world scientific community and used in the methodology of teaching foreign languages. Many scientists (A. Leontiev [6], M. Canale [2], R. Milrud [9], N. Zimnaya [15], N. Gez [4], V. Safonova [10], J. Savignon [11], E. Litnevskaya, V. Bagryantseva [7], F. Litvinko [8], V. Avrorin [1], M. Kabardov [5], A. Taova [12] and others) have devoted their works to the issues of
The aim of the article. The aim of the paper is to consider and analyze the formation and development of foreign language communicative competence in the process of teaching future lawyers.

Materials and methods. Today, one of the most generally accepted meanings of the term "competence" is a combination of knowledge, skills and abilities of the language being studied.

We consider future lawyers foreign language communicative competence within the framework of the state’s modern language policy which is aimed at improving professional communicative competence. The legal profession is based on various types of communication with people who differ in their social, religious, moral and political principles. Therefore, it is extremely important for specialists in legal field to possess a communicative competence. Unlike other disciplines, foreign language as a subject has a particular range of peculiarities: communicative orientation, interdisciplinary, multifunctionality, multilevelness, objectlessness and infinity.

The communicative orientation of foreign language teaching is predetermined by the solution of specific communicative and pragmatic tasks in real life foreign language situational communication. The interdisciplinary of foreign language is connected with the fact that information from different fields of science may be used in the content of foreign language communication.

In linguistics there exist no unified approach to the question of definition and content of language functions. The functions distinguished by the scientists are the following: communicative, cognitive, regulatory and emotionally expressive. Foreign language multilevelness is determined by the need, on the one hand, to master various linguistic means that are related to aspects of the language (lexical, grammatical, phonetic), and on the other hand, to acquire skills in four types of speech activity.

The acquisition of foreign language as a subject does not provide students with direct knowledge of reality (in contrast to the criminal law, where a specific definition is given to its subjects). "Language is a means of expressing thoughts about objective reality, while its consistent patterns are the subjects of other disciplines. In this sense, foreign language as a discipline is "objectless" ... The specifics of foreign language as a subject also lies in its infinity" [15, 59–60]. Students in the process of studying foreign languages cannot be limited with learning the only topic. They need to acquire and possess a wide range of components, from phonetics to grammar and syntax. Thus, a foreign language as an academic subject in higher education institutions is limited to a particular program, but as an object of cognition it is entirely unlimited.

We suppose that the original function of any foreign language, can be explained by the definition given in the work of V. Avrorin: “The language function is the practical demonstration of its essence, the implementation of its purpose in the system of social phenomena, the certain existence of the language, specified by its very nature” [1, 34]. We consider the foreign language communicative function
WAYS TO FORM FOREIGN LANGUAGE COMMUNICATIVE COMPETENCE OF FUTURE LAWYERS

as a complex integrated phenomenon in which all its basic characteristics are combined. One of the foreign language features is its multifunctionality.

Taking into consideration the foreign language specifics in comparison with the specifics of other subjects, we can highlight certain other distinctive functions that are as important as those mentioned above. According to L. Vygotsky, “mastering a foreign language follows the path directly opposite to the one, the native language is developing... A child assimilates the native language unconsciously and unintentionally, while the foreign one — beginning with awareness and intention” [13, 233]. The awareness of means and ways how to form and express the ideas and their implementations in phrases, the process of language comprehension accompanies the mastering of foreign language. This statement does not contradict the fact that in the process of foreign language communication the content can be controlled by the consciousness exclusively: a person consciously chooses what to say, whom to address and in what consequence the information is necessary to say. The form of thought expression is implemented at the level of basic mechanisms of human activity. Thus, one can distinguish a thought-forming or thought-creating foreign language function.

Let us mark one more peculiarity that has become the distinguishing characteristic of a language and a foreign language in particular: the foreign language, as a subject unlike other disciplines embodies a goal of education as well as a learning tool. Since students acquire information and study various disciplines through a language as a tool, mastering foreign language itself, causes the problem of gradual, externally correlated perception of certain, less complicated means and ways in order to solve, using previous knowledge, more complicated and complex perceptive tasks. The regulatory and cognitive functions of foreign language are associated with this process.

Students get acquaintance with cultural, historical features and values of another country, learn customs and traditions that are atypical for the country they live in. Therefore, we can distinguish the cultural function of foreign language. In the context of interdisciplinary communication, foreign language has become the means of expanding, differentiating and clarifying the conceptual and categorical apparatus of other disciplines in the process of future lawyers training. Based on this statement, we can distinguish the accumulative function of the language. Using the various functions of foreign language consciously, students do not only satisfy the cognitive interest, but also develop foreign language communicative competence.

Conclusions. The formation of future lawyers’ foreign language communicative competence can be implemented by means of involvement of specially organized communication training in the educational process. This process occurs and can be realized through communicative competence formation of future lawyers through the development of communicative skills in all types of speech activity: speaking, reading, listening and writing. If consciously mastering the linguistic means, students gain knowledge and experience about different ways of expressing thoughts and emotions in accordance with communicative situations. Acquaintance with cultural traditions and spiritual values of another country allows students to form the personal intercultural competence. Thus, specially organized foreign language communicative training allows future lawyers to form such components of communicative competence as speech, language, sociocultural, educational, cognitive and compensatory competences. Foreign language communicative competence refers to a group of key competencies, which plays particularly important role in a personal life as well in the professional activity and growth.

At the same time, the formation of foreign language communicative competence for a future lawyer requires specific conditions that would effectively contribute to this process. We consider the use of innovative technologies for teaching foreign languages as one of the most prominent ones, in particular, role-playing game technologies, which contribute to more motivated, free and friendly foreign language communication. The professional activities of a lawyer are characterized by dynamism, unpredictability, and various situations that require immediate resolution of a problem. In this regard, the development of future lawyers operational thinking is considered to be very important in order to form their communicative competence through the opportunities that foreign language acquisition provides.

I. Zimnaya defines communicative competence as the mastering of complex communicative skills and abilities, the formation of adequate skills in new social environment, the knowledge of cultural norms and restrictions in communication, knowledge of customs, traditions, etiquette in the field of communication, observance of decency, upbringing; orientation in the communicative means inherent in the national, class mentality, development of the role repertoire within the framework of this profession [14].

The formation of foreign language communicative professional competence is the key to the successful development of a professional career for future lawyers. It involves the preparation of highly qualified
specialists who are ready to cooperate and interact in the field of law and international law with native speakers of another country and culture in order to conduct research and professional activities in the field of law and international law, as well as to continue communicative and professional growth and development.
